

The 16S rRNA gene sequence information

The 16S rRNA gene sequence of the strain determined by ourselves (AB055122) is different at 64 out of 1304 positions from that of formerly published sequence (i.e. Z70250). To reveal correctness of the sequence, the original culture of this strain (i. e. ST557) kept at the author's laboratory was analyzed, and the sequence (AB055128) was identical with that of JCM 10128 (AB055122).
